

EV Stations Offer Municipalities a Range of Benefits

Supporting sustainability initiatives is not a trend but an approach to the demands of our time, and its relevance is only going to continue to increase. Municipalities can derive a range of environmental, economic and social benefits from “going green”. Installing Brightfield® Charging Stations for residents and visitors is one example of an initiative that helps the environment by supporting vehicles that reduce greenhouse gas emissions AND impacts the local economy by drawing EV driving visitors to your commercial districts.

Brightfield® Charging Stations will enable you to...

- **Meet the Needs** of your EV driving residents
- **Increase** traffic to your commercial districts
- **Capture** EV driver dollars as they spend money at local businesses while they wait up to 3 hours for their EV to charge
- **Align** your City or Town's image with cutting edge Solar Driven® technology
- **Prepare** for the shift to electric transportation
